

PG + DISCO CHALLENGE · 60 MIN

Cursor Enterprise Pipeline + Discovery.

Cursor wins on workflow, context, and execution.

~70% of the Fortune 1000 already use it.

STRUCTURE

P1 · Greenfield (Spain & Italy) (20–25')

P2 · Mock Disco Figma (20–25')

P3 · Reflection & Debrief (10–15')

POSTURE

Discovery > pitch.

Opinionated, not scripted.

Ground claims, no hype.

60 MINUTES, THREE CONNECTED EXERCISES

How the time will be spent.

Account-development mindset informs discovery. One story, three proofs.

PART 1 0-25 min

Greenfield Pipeline (Spain & Italy)

Top 5 ranked · deep-dive #1 · stakeholder map · entry & 90 days.

PART 2 25-50 min

Mock Discovery — Figma inbound

Marcel Weekes · 650 engs · 85% VS Code · Copilot + Claude Code · 31 shadow Pro.

PART 3 50-60 min

Reflection & Debrief

Top insights · deal hypothesis · 4 strategic questions · self-assessment.

PART 1 · GREENFIELD PIPELINE

Spain & Italy from zero.

*Iberia + Italy GTM. Top 5 ranked, deep dive on Santander:
account thesis, stakeholder map, entry sequencing, first 90 days.*

BEFORE THE TOP 5

How I rank an ENT account in Spain & Italy.

Five lenses, weighted. Any exception — I find out why.

- | | |
|-------------------------------------|--|
| → 01 · Eng headcount | ≥ 5K engineers for a meaningful enterprise deal. The bigger, the louder ROI math gets. |
| → 02 · Public AI mandate | Executive-announced AI roadmap → easier champion uptake, urgency already exists. |
| → 03 · Reg / privacy posture | EU regulated (DORA, EU AI Act, ECB) = Privacy Mode = enabler, not blocker. Our edge. |
| → 04 · Codebase complexity | Legacy + modern + mono/multi-repo = large codebase performance becomes pivotal. |
| → 05 · Procurement reach | Identifiable dev-tools team + traceable procurement path = deal velocity. |

GREENFIELD · RANKED

Top 5 — Spain & Italy GTM.

Defensible ranking. Santander as #1 → deep-dive on the next 4 slides.

#1	Santander	~15–20K tech · 'One Transformation' under Dirk Marzluf · multi-jurisdiction regulated · Openbank = digital-native wedge.	<i>Largest Iberia TAM + champion-ready.</i>
#2	BBVA	~10K tech · ChatGPT Enterprise already rolled out org-wide · 'born digital' under Carlos Torres.	<i>AI-ready buyer, strong deal velocity.</i>
#3	Enel	~15K tech · energy transition = urgency · OpenInnovability AI lab · mature CISO function.	<i>Largest Italy TAM.</i>
#4	EssilorLuxottica	~5–7K tech / 190K total · Industry 4.0 + e-commerce push · regulated (medical devices).	<i>FR/IT footprint, industrial leverage.</i>
#5	El Corte Inglés	~2–3K tech · e-commerce + supply chain transformation under Marta Álvarez · less crowded.	<i>Less competitive crowding, accessible.</i>

TOP PROSPECT · ACCOUNT THESIS

Santander — why now, where Cursor wins.

4 angles. Every one has a public, citable proof point.

WHY SANTANDER

~15–20K tech (Santander Global T&O + Openbank + Cardinal).
Ana Botín references AI on every earnings call.
OpenAI + Google Cloud partnerships announced in 2024.

WHY NOW

'One Transformation' T&O launched
2024 under Dirk Marzluf.
BBVA deployed ChatGPT Enterprise
org-wide → direct competitive pressure.
DORA + EU AI Act = AI governance urgency.

CURSOR LEVERS

Velocity (Openbank, digital-native).
Governance (Privacy Mode for ECB / BoE / Fed).
Onboarding (rotations across 10+ countries).
Cost (lower IT spend / revenue ratio).

MARKET FORCES

AI talent costly in Iberia → tool = hiring & retention lever.
Model neutrality = resilience vs EU sovereign-AI ecosystem.
Claude Code being evaluated at EU peers (ING, BNP).

ENGINEERING ORG MAP

Who I target, in what order, and why.

Power signals: T&O budget, T&O hiring in Madrid/London, sponsorship of board-level AI initiatives.

01	Openbank CTO + Head of Engineering	Wedge #1. Digital-native subsidiary, autonomous, shorter procurement.	<i>Cold + LinkedIn. Message: '30-day pilot on one squad, metrics pre-defined.'</i>
02	VP / Director of Developer Productivity — Santander T&O	Economic buyer at Group level. Owns the dev tools budget.	<i>Warm intro via Madrid tech community + EU bank reference customer.</i>
03	AppSec leadership (under the Group CISO)	Gatekeeper. Not a blocker if Privacy Mode + SOC 2 + DORA-aligned anticipated.	<i>Include them early, send SIG + pentest + DPA before asking.</i>
04	Dirk Marzluf (Group Head of T&O)	Executive sponsor. Not first-touch — engaged once we have a quantified POC.	<i>Once POC live: board-level ROI + risk reduction narrative.</i>
05	Engineers (bottom-up)	Shadow adoption = Marcel-style signal. Free-tier monitoring on @santander.com.	<i>Track signups, identify a staff IC champion in Madrid.</i>

PIPELINE & SEQUENCING

How I create momentum.

Multi-channel, sequenced, measurable outreach. 90 days to a quantified Openbank POC.

ENTRY POINTS — sequenced

Openbank-first	Digital-native wedge. Target Openbank CTO + Head of Eng. Shorter procurement.
Cold outbound	Dir DevProd Santander T&O + AppSec, 3 touches/week, ROI + EU bank reference.
Warm intro	Madrid tech community (South Summit, Endeavor, Wayra alumni). Small world.
Conference	South Summit Madrid · Money 20/20 Europe · DevOpsCon Madrid.
Bottom-up	Free-tier monitoring on @santander.com → IC champion in Madrid/Boston.

FIRST 90 DAYS

D0-D30	Research Openbank + Santander T&O. 3 cold touches/week + 1 warm intro Madrid. Success: 1 mtg Openbank CTO, 1 mtg AppSec.
D30-D60	Discovery Openbank + parallel T&O intro. Success: 20-30-engineer POC signed on one Openbank squad (mobile or backend).
D60-D90	POC live, Privacy Mode mandated + DORA-aligned. Success: cycle-time + PR + NPS measured. Opens Group T&O conversation on 1K+ seats.

INITIAL PILOT MOTION · OPENBANK WEDGE

What the quantified POC looks like.

Openbank = path of least resistance. Success here opens Group T&O on 1K+ seats.

SCOPE

20–30 Openbank engineers
(digital-native, modern stack,
high velocity).
30 days.
1 mobile or backend squad,
1 reference repo.

METRICS

Cycle time (PR opened →
merged)
PR throughput / engineer / week
Senior IC adoption rate
NPS engagement at D+15 and
D+30.

SECURITY DAY 1

Privacy Mode mandatory.
SOC 2 + SIG sent D-7.
DORA-aligned: audit logs, EU
data
residency validated.
Group AppSec in the loop from
D0.

EXIT GATE

Cycle-time ↓ ≥ 12%
NPS ≥ 50
Senior IC adoption ≥ 60%
→ opens Group T&O
conversation
on Santander Global Tech: 1K–5K
seats.

Marcel Weekes inbound.

VP Eng · ~650 engineers · 85% VS Code · Copilot deployed ·

Claude Code being evaluated · 31 Cursor Pro shadow users (mixed Privacy Mode).

WHAT WE KNOW BEFORE WE WALK IN

The brief, in 6 facts.

Every fact is a discovery lever. We leverage them — not repeat them.

Marcel Weekes	VP of Engineering, leads ~650 engineers.	→ <i>Primary economic buyer. KPIs: velocity, talent.</i>
~85% on VS Code	Dominant internal standard.	→ <i>Cursor = VS Code fork. Drop-in. Muscle memory transfer.</i>
GitHub Copilot	Deployed across the entire team.	→ <i>Known baseline. 'Why change' = quality gap, not absence of tool.</i>
Claude Code eval	Actively under evaluation right now.	→ <i>THE competitor. 'Why now' is already established on their side.</i>
31 Cursor Pro	Shadow internal usage, mixed Privacy Mode.	→ <i>Gold. Silent champion + sec risk = their problem, our wedge.</i>
Attendees	Marcel + Security Eng Leader + Security IC.	→ <i>2 of 3 are security. This is a security-first conversation.</i>

CALL STRUCTURE

20–25 minutes, timeboxed.

Marcel speaks first. Security joins minute 5. Goal = specific follow-up, not pilot close.

0:00 – 1:30	Framing	Agenda · permission · anchor on the 31 Pro users.
1:30 – 9:30	Discovery	Marcel first, Security from minute 5.
9:30 – 13:00	Thesis + 1 proof point	Why now (their urgency) · why Cursor (vs Claude Code).
13:00 – 17:00	Security	Privacy Mode 3 bullets + SOC 2. I open it, not them.
17:00 – 20:00	Specific next step	Named follow-up: who, when, what for.

THE FIRST 90 SECONDS

Opening script.

Visible preparation (name, facts) · no pitch · pre-engagement on the agenda.

“ Marcel, thanks for the 20 minutes — and thanks to [Security Eng Lead] and [Sec team member] for joining, this is exactly the right room for this conversation. Before we start: I noticed 31 of your engineers are already on Cursor Pro in mixed Privacy Mode. Rather than pitching, I'd rather start from that reality — understand what you're seeing internally, what's pulling the Claude Code evaluation in parallel, and where you want all of this to be in 6 months. I'm going to spend most of the time asking questions. My goal on Cursor's side: a specific, useful follow-up, not a pitch. Does that framing work for you?

8 MINUTES · VP OF ENGINEERING

Questions anchored on the facts.

Every question points at a known fact. No generic questions.

- | | | |
|----|----------------------------------|--|
| 01 | Origin of shadow | "31 engineers on Cursor Pro — how did that happen, and what do they say when you ask them?"

→ Bottom-up signal. If Marcel didn't know, that's a visibility gap = wedge. |
| 02 | Pressure-test Claude Code | "What made you look at Claude Code now rather than 6 months ago, and what would you expect from a switch?"

→ 'Why now' lives here. We let Marcel articulate it for us. |
| 03 | Copilot gap | "Copilot is deployed wall-to-wall — what work should be assisted but isn't today?"

→ Refactors · large context · review. Where Cursor has a tangible edge. |
| 04 | Senior IC opt-out | "Are senior and junior engineers using Copilot the same way? Is there a tier that's quietly disengaged?"

→ Senior opt-out = org ROI capped at ~5%. Our strongest gap proof. |

BRING SECURITY IN (2 OF 3 ATTENDEES)

Security questions anchored on the shadow Cursor reality.

The topic is already on their desk — 31 Pro users in mixed Privacy Mode. We name it.

05	Shadow Cursor	"The 31 Pro users in mixed Privacy Mode — has that triggered an internal review yet, or not?" → Surface the existing risk without dramatizing it.
06	Sanction criteria	"What does an AI coding tool need to prove to be sanctioned at Figma — beyond SOC 2?" → Audit logs? Data residency? BYO-key? We note it to anticipate.
07	Claude Code security posture	"How is the Claude Code evaluation going on the security side — what are you looking at alongside product capability?" → Reveals the comparison terrain. Privacy Mode is a differentiated argument.

THREE ANGLES THAT MATCH THEIR REALITY

Why Cursor — calibrated for this specific account.

We take the 4 official differentiators and zoom them onto Figma.

01	VS Code fork = drop-in	85% of the team is already on VS Code. Muscle memory, extensions, keymaps, settings carry over. Adoption cost $\approx$ 0.
02	Large codebase performance	C++/WASM editor + Rust/TS infra = complex repo. Exactly where Cursor outperforms — semantic search, indexing, retrieval.
03	Model neutrality vs Claude Code	Claude Code = Anthropic-locked. Cursor keeps SOTA access flowing — you don't bet the next year on a single provider.
04	Platform, not just a tool	Plan · write · review · debug · iterate in one environment. Not a CLI next to the IDE. Workflow integration > raw intelligence.

WHY THIS MATTERS BEYOND FEATURES

Michael Truell's vision for Cursor.

Software development is shifting from typing characters to expressing intent.
The editor becomes the place where that conversation happens.

“ We're building toward a ‘human-AI programmer’ — one entity, combining engineer judgment with AI execution.

Senior judgment gets more valuable, not less. The editor becomes the system where engineering judgment scales.

Michael Truell · CEO & co-founder, Cursor

WHAT THIS MEANS FOR FIGMA

The bet isn't ‘20% faster typing.’

It's that a single senior engineer's leverage becomes 3–5× what it is today — and the orgs that get there first compound the advantage every quarter.

For 650 engineers on a complex codebase, that's the line the conversation should be on — not features.

WHAT TO SAY — “The outcome we're betting on isn't faster typing. It's that senior judgment compounds at 3–5× leverage. We want Figma on that curve, not behind

MINUTE 13 — I RAISE IT MYSELF

The topic is already with them. We resolve it.

31 Pro users in mixed Privacy Mode = real existing risk. Here's how Cursor resolves it.

- | | | |
|----|-----------------------------|--|
| 01 | Code not retained | Customer code is not stored or retained — contractual, not a toggle. |
| 02 | No training | Code is not used to train models — neither ours, nor third-party providers'. |
| 03 | Ephemeral requests | Requests are isolated and ephemeral — no persistent prompt logs. |
| 04 | Enterprise readiness | SOC 2 · admin controls · visibility · SSO. Security ↔ security call within 7 days. |
| 05 | Shadow → sanctioned | The 31 current Pro users can switch to mandated Privacy Mode in < 1 day. |

MINUTE 17 — THE EXIT

The exercise goal: a specific follow-up.

Not a pilot. Not a 'let's reconnect.' A named meeting, dated, with a purpose.

PROPOSED FOLLOW-UP

60 minutes, within 10 days — Cursor SE + Cursor Security ↔ Figma DevEx + AppSec.

Purpose: (1) technical scoping of a 20–30-engineer POC on a named repo, pre-defined metrics, Privacy Mode mandated; (2) parallel security review (SIG, pentest, architecture, DPA sent D-7).

WHAT TO SAY

"Marcel, is it worth blocking 60 minutes within 10 days — you + security + our counterparts? I'll send you a draft agenda today."

PART 3 · REFLECTION & DEBRIEF

10 minutes. Structured thinking.

2–3 silent minutes to gather. Then: top insights · deal hypothesis · strategic questions · risks · self-assessment.

TO FILL IN DURING THE 2 SILENT MINUTES

Top 3–5 insights + deal hypothesis.

Format: one insight = one observed fact from discovery + what it triggers.

TOP INSIGHTS (formulate live)

1. Does Marcel know about the 31? → if yes, potential champion; if no, visibility gap.
2. Claude Code = real eval or scouting? → real urgency or parked.
3. Senior IC opt-out on Copilot? → proof of quality gap, not tool absence.
4. Security posture: blocking or facilitating? → deal velocity.
5. Pre-allocated budget? → 3-month vs 9-month signature delay.

DEAL HYPOTHESIS

Typical setup:

- Medium urgency (Claude Code is in eval, not decision)
- Champion TBD (Marcel? or a staff IC among the 31 Pro?)
- Security = real variable (deal-maker or deal-killer)
- Realistic deal: 60-day POC, 500–650 seats at 6–9 months.

THE 4 QUESTIONS FROM THE PROMPT

Pre-prepared answers — to reformulate live.

Don't recite. Reformulate with what you heard in discovery.

→ **Why does Figma need an AI coding solution — Cursor or not?**

650 engineers on C++/WASM + Rust + TS = high-complexity work. Without a structured AI lever, senior talent looks for productivity elsewhere (internal or external).

→ **What happens if they do nothing for 3–6 months?**

Shadow Cursor grows from 31 to 100+. Claude Code may roll out without governance. The cost isn't the tool — it's uncontrolled security + patterns locked on Copilot.

→ **Is there a credible champion? Evidence?**

To test: does Marcel know about the 31? Is a staff IC among them identifiable? Champion = someone who defends the deal when we're not in the room.

→ **How is Cursor uniquely positioned?**

VS Code fork (drop-in for 85% of the team) + model neutrality (vs Claude Code) + large codebase performance (vs Copilot) + Privacy Mode (vs current shadow usage)

ANTICIPATE, THEN SELF-CRITIQUE

Expected risks + what I would change.

Self-aware > overconfident. Name the fragilities before they're called out.

ANTICIPATED DEAL RISKS

Claude Code competition	Eval may conclude 'good enough' before we ship our POC.
Security as blocker	If AppSec isn't addressed D0, pilot slips 3 months.
Internal politics	Copilot has an internal sponsor — switch read as a failure.
Tool sprawl	Cursor + Copilot + Claude Code in parallel = no one decides.
Procurement	Vendor risk review + DPA = 60–90 days, non-compressible.

SELF-ASSESSMENT (template)

What worked

Opening on the 31 Pro = proof of prep.
Letting Marcel articulate 'why now'.

What I'd change

More time on concrete use cases (refactors vs review).
Push earlier on budget.

Greenfield → disco

Account thesis fuels targeted questions.
Known facts = wedges, not accessories.

WHEN YOU LOSE THE THREAD

6 phrases to use word-for-word.

Take the wheel back without pitching. Keep executive presence under pressure.

IF SILENCE DRAGS

"I'd rather give you the time — this is your conversation."

IF ASKED A NUMBER YOU DON'T KNOW

"I don't want to make one up — I'll get back to you with the real answer today."

TO PIVOT TO SECURITY

"Before we go further, I want to open security — that's where this gets real."

IF CURSOR GETS HIT

"Fair feedback — here's what we do well, here's where we're not the best."

TO PRESSURE-TEST

"What would need to be true for this to be a no?"

TO CLOSE

"One question before we book the follow-up: what should I have asked?"

HIDE DURING THE EXERCISE

What is actually being evaluated.

Six dimensions, explicit in the prompt. To project actively across the full 60 min.

WHAT'S BEING EVALUATED (from prompt)

- Strategic thinking & account thesis
- Enterprise stakeholder mapping
- Ability to CREATE urgency (not just respond)
- Quality + sequencing of discovery
- Executive presence & clarity of thought
- Structured thinking in debrief

SIGNALS (from Cursor prep doc)

STRONG — to project

- Prepared
- Self-aware
- Composed
- Tactically sharp
- Coachable

WEAK — to avoid

- Feature dump
- AI hype
- Overconfident without grounding
